

텐션메타 / TS205 P

모델: : Tension Star “TS205P”

자동 zero adjustment 기능

V 형태 롤러 혹은 ceramic pins 타입 (선택)

USB 2.0 PC connection 지원: 통신 및 측정

On-line S/W for data collection and analysis 포함

측정범위: 0.1 to 400 cN

분해능: 0.1 cN from 0 to 100 cN
1 cN from 100 to 400 cN

측정기 표시: LCD graphic display , 10.5 mm letter

Memory 기능: 최대 999 number (AV, Peak, low)

구성: Carrying case, USB Charger and USB cable, Manuel and test report 포함

TECHNCAL DATA

TS205 P.

Roller 타입: m/min, Ceramic pins 타입: 6000 m/min

Accuracy: +/- 2% = (1 - rated value / Indication) x 100

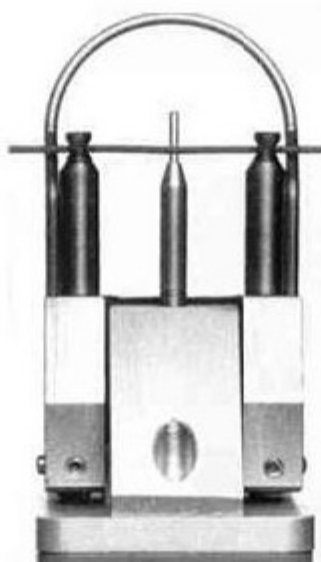

소비전력: 0.19 W

전원: 6 x 1.2 Volt AAA AKKU

최대 사용가능 과용량" 150%

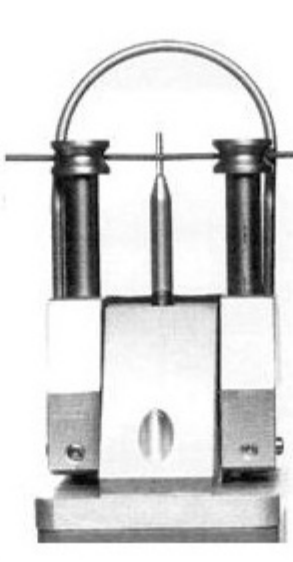

Internal Frequency: 700 Hz

Type P

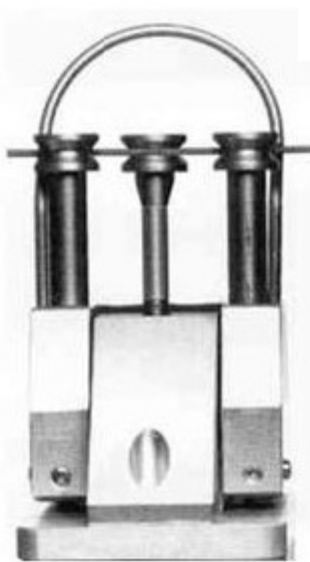

with 3 sinter ceramic pins
up to 6000 m/min

Type R

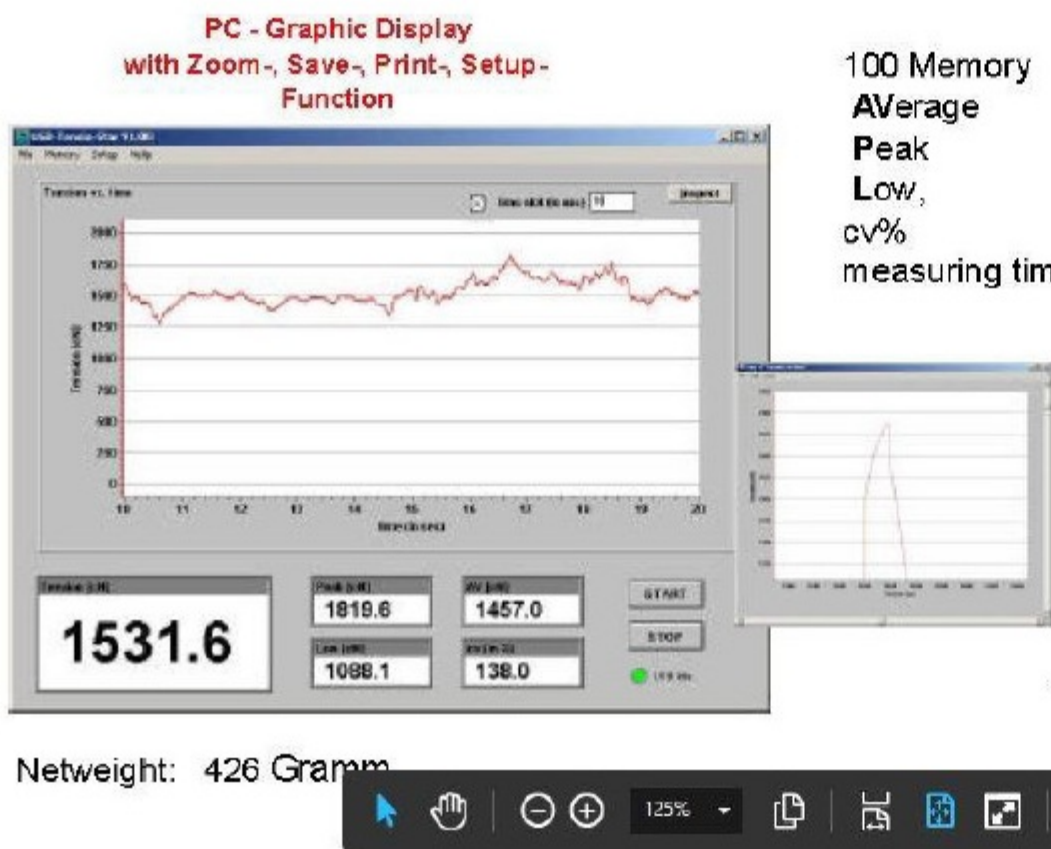

with 2 ball bearing rolls and 1 sinter ceramic pin
up to 3000 m/min

Type R/R

with 3 ball bearing rolls
up to 3000 m/min

up to 3000 m/min

Accu charging and
data transfer over
USB plug.
Optional charger
available

♣ The **TENSION STAR** is lighth, has
a long live and is easy to use.

TENSION STAR TS205

Problems with the install.

The TensionStar software always OK by installation.
Switch on the instrument connect the PC and TS 205 by USB
cable. Windows start the USB driver.
The problem is windows setup of USB driver.
Go to the Windows system and check the USB driver is installed.
The USB FTDI driver must be active.

The instrument need a lot off PC capacity, so may your PC is to
slow (1MHz) or the memory (500M Ram) to small.

You use Anti virus and firewall (Norton, McAfee etc.). Because off
the high data transfer the Anti virus software breack down the
transfer.
By setup you check the software is free of virus, so for measuring
stop the anti virus program and firewall.

To many programs are running in the background, make windows
slowly.
